

Mold and Moisture Inspection

Whether your home or office is affected by a moisture or humidity related event or other indoor environmental quality challenges, fast and accurate evaluation of the extent of the issue is critical to returning the building to a healthy balanced state. IET will conduct a full investigation designed to determine the extent of damage to the property and, if needed, to create a remediation protocol for repair of the affected areas. As we do not perform any remediation ourselves or have direct connections with remediation companies, we function as an "honest broker" providing defensible and dependable information.

A healthy indoor environment supports life and the wellbeing of its occupants. News about rising cases of childhood asthma, allergies and general wellbeing, as well as learning and behavioral problems has been linked to mold and poor indoor environmental quality.

IET has been performing these services since 1992 with thousands of satisfied clients in the commercial, residential, health care and education field.

No matter what your environmental issue or concern, most problems can be identified with proper testing, a thorough understanding of the building history and structure. Contact us today at 727-446-7717 so that we can answer further questions you may have!

SERVICES OFFERED
