Moisture & Mold Remediation Protocol (MRP)

When your home or office is affected by moisture or water intrusion, a fast and accurate evaluation of the extent of the damage is critical to returning the property to a healthy pre-loss state. IET will conduct a full investigation designed to determine the extent of water/mold damage to the property & to create a remediation protocol for the removal and repair of the damaged and affected areas. As we do not perform any remediation ourselves or have direct connections with remediation companies, we function as an "honest broker" providing defensible and dependable information.

A healthy indoor environment supports life and the wellbeing of its occupants. News about rising cases of childhood asthma, autism and cancer, as well as learning and behavioral problems is being linked to damp buildings, mold and other environmental exposures.

IET has been performing these services since 1992 with thousands of satisfied clients in the commercial, residential, health care and education field. Our team is well prepared to help you solve your building health problems.

No matter what your indoor environmental issues are, most problems can be identified with proper investigation and testing and thorough understanding of the building history and client concerns. Contact us today at 727-446-7717 so that we can answer further questions you may have!

MEMBER OF

SERVICES OFFERED
